

Task No :- 6

Date :- 16/9/25 Triggers and Views

Aim :- To implement and create a triggers and a views in SQL

Trigger in SQL :-

A special SQL procedure that automatically executes when a specific event (like INSERT, UPDATE, DELETE) happens on a table.

Syntax :- Create Trigger trigger_name
on table_name
After Insert/Update/Delete
As
Begin
-SQL statements to execute
End;

Query :-

Create trigger insert_default_account

After Insert on Customer

For each row

Begin

insert into bank_account (account_number, customerID,
balance, category) values (1000 + :new, customerID, :new,
customerID, 0, 'Default');

End;

insert into customer (customerID, name, address) values
(1, 'Alice', 'Hyderabad');

insert into customer (customerID, name, address) values
(2, 'Bob', 'chennai');

Select * from bank_account;

Output :-

Account-number	customerID	Balance	Category
1001	1	0	Default
1002	2	0	Default

View in SQL:

A View is a virtual table based on the result of a SQL Query. It doesn't store data itself.

Syntax:- Create View View_name AS
Select Column1, Column2,
From table1
Join table 2 on Condition
where condition;

Query:- Create View customer Account details AS
Select
C.CustomerID,
C.name AS CustomerName,
C.address AS Customer Address,
ba.account_number AS AccountNumber,
ba.balance AS AccountBalance,
ba.category AS AccountCategory
from Customer C
Join bank_Account ba ON C.CustomerID =
ba.CustomerID;
Select * from customer Account Details;

Output:-

Customer ID	CustomerName	Customer Address	Account Number	Account Balance	Account Category
1	Alice	Chennai	1001	10000	Savings
2	Bob	Hyderabad	1002	25000	Salary
